

Construct me this: Class VI March 15, 2023.

Director Sir leads....

Class VI was taken to the construction site within the campus wherein the future Boarding House with a capacity to house a hundred boarders is slated to come up very soon.

The children were shown the construction equipments and they learnt to identify the tools with the specific work each did. A novel way of taking classroom studies to the field. The tour of the construction site was an eye opener as it brought many things to light for the children.

They were mildly and pleasantly surprised to learn of such ordinary things in life that are used in the construction of buildings for various purposes, living, office, factory, shopping centres and so on. Director Sir conducted the tour and asked several questions of the learners which they answered enthusiastically. Certainly some of them would now want to be a civil engineer or at least a developer or a promoter! There's fun, there's creativity and there's money in this construction profession!
